

Front-end Technical Assessment

Objective: Gauge and assess candidate's understanding of core UI building blocks that make up a web application: HTML and CSS.

Requirements:

- You are to only create the visual elements in screenshot therefore no actual functionality is needed from UI.
- Only static HTML and CSS can be used, no JavaScript, framework or any other tools are allowed.
- The UI should be responsive down to minimum 1200px width.
- **Please ensure that the project runs and is viewable in the browser, submit the full project with the code (share link to project) not just the page screenshot itself.**
- **Email must be sent to adrian.borrego@citi.com before starting and follow-up email sent when you have completed along with link.**
- **Maximum time limit is 3 hours.**
- Find an appropriate time of the day when you are free from distractions. Remember this is to gauge your skill level and will help us determine where you fit best!

Instructions:

- Create a web UI project using any developer platform of your choice.
 - We recommend <https://stackblitz.com/?starters=frontend> which is a fast easy way to get started online.
- 
- - Once you have your development environment ready to start send an email to interviewer and resourcing partners to indicate start time.
 - Re-create the UI screenshot below using only HTML and CSS elements.
 - **Do not delete package.json files so server can render your page when submitting.**
 - Once completed send an email and share the link to your project.
 - Note your final output should be HTML and CSS that you wrote only, no imported libraries, no bootstrap etc.
 - Average test time is 1 hour, but you have up to 3 hours to submit your solution. Please ensure that the project runs and is viewable in the browser.
 - Good luck!
